CLAIMS

What is claimed is:

1.   A method for providing a data stream to a client from a source including:

providing access to a system to the client, said system based on the distribution of data streams on demand;

verifying the identity of the client;

supplying the client with a data stream from the source, said data stream based on a demand of the client; and

setting up a secured channel at the same time as said supplying, said secured channel reserved for optional feedback from the client.

2.   The method of claim 1, wherein the source is a provider and/or distributor of services, information, or goods, the sale or distribution thereof ensured by said data stream transfer.

3.   The method of claim 1, wherein said supplying is optimized by choice of a path and/or time and/or distribution method.

4.   The method of claim 1, further including inserting an identification of the source and of the client into said data stream at the time of said supplying.
